

Batching with LINQ

```
static IEnumerable<IEnumerable<T>> Batch<T>(this IEnumerable<T> source, int batchSize)
{
    return source.Select((item, idx) => new { item, idx })
        .GroupBy(x => x.idx / batchSize)
        .Select(g => g.Select(x => x.item));
}
```
