

RegEx in multiple files multi-line pattern

```
pcgrep -h -r --include=".*\.cs" -M "LogEvent\([\s\S]*?\)\;" .
```

- -h: Exclude filenames
- -r: recursive
- --include: include file names that matches with the pattern
- -M: multi-line mode
- PATTERN: match all occurrence even if it is multi-line

Example: await LogEvent(\$"This is a test message that has embedded {property}");

```
pcgrep -h -r --include=".*\.cs" -o1 -M "LogEvent\([\s\S]*?\)\);" .
```

- -o: shows only match, not the entire line. -o{n} shows only the {n}th group
- Matches only: \$"This is a test message that has embedded {property}"
